## Press Release

03/02/2004

---

### **HDClone & HDS shredder now support SCSI**

**MUNICH – March 2, 2004 – The OS-independent harddisk tools *HDClone* and *HDS shredder* from the SAT-Series of *miray Software* are now also available for SCSI harddisks. At the same time *miray* publishes also a new version of the free *HDClone Free Edition* as well as the free testing tool *DiskCheck*.**

After version 2.0 of **HDClone** and **HDS shredder** had already been released at the Systems exhibition in 2003, supporting DMA and the even faster UltraDMA modes, the product range has now been extended by another edition, the **Professional SCSI Edition**. *HDClone* and *HDS shredder* thereby support the popular Ultra, Wide, UltraWide and U160 adapters from Adaptec and connected harddisks up to 2048 GB. Thus it is now possible to create copies between SCSI and IDE harddisks with the new *Professional SCSI Edition* of *HDClone*.

Along with the release of the *Professional SCSI Edition*, support of UltraDMA in the existing *Professional Edition* has also been improved. For testing if and how good a certain system is supported, the new tool **DiskCheck** is available for free. This tool lists all IDE and SCSI harddisks found in a system. It is based upon the same IDE and SCSI drivers as the other tools and additionally offers performance testing for each harddisk detected. *DiskCheck* can be downloaded for free at <http://www.miray.de/download/sat.diskcheck.html>.

For facilitating migration of a system to a bigger harddisk for users, *miray Software* will further on offer the **HDClone Free Edition**, which is free of charge. It allows copying a smaller harddisk onto a bigger one. *HDClone Free Edition* is now ready for download in its newest version 2.0 at <http://www.miray.de/download/sat.hdclone.html>.

***Miray Software* offers your editorial department specimens of HDClone and HDS shredder for reviewing. Please send your request to [pr@miray.de](mailto:pr@miray.de).**
