HDS shredder 3.2 Free Edition - secure drive deletion free of cost

MUNICH – 17. September 2008 – Miray Software has extended the successful drive deletion tool HDS shredder by a free-of-cost edition for private users. HDS shredder 3.2 Free Edition offers secure deletion of hard disks, multimedia storage (SD, MMC, CompactFlash, etc), USB key drives and many other types of mass storage. HDS shredder's user interface is comfortable, yet easy to use.

The main obstacle of secure drive deletion: it is not applied in many cases – the resulting risk is being ignored due to the necessary effort. This is the strength of HDS shredder: drive deletion with easy operating. No studying of manuals, no installation, and even without an operating system.

HDS shredder appeals to all kinds of users and combines ease-of-use with professional features. HDS shredder enables private users and small businesses to perform drive deletion hassle-free and efficiently. Huge businesses can add HDS shredder to their existing data deletion process, e.g. for a primary deletion of highly sensitive data right in place.

The Free Edition allows private users to delete storage media before dumping it with minimal effort – and at no cost. Afterwards, these media can even be offered carefree over online sales platforms since they cannot be restored, even not by recovery software.

The editions Basic, Standard and Professional are intended for frequent and professional use. Besides other features, they support creation of deletion protocols as well as deletion conformant with German and international security standards. These can even protect from data recovery in special data recovery labs.
