HDClone - upsizing partitions arbitrarily

MUNICH – 02. December 2009 – Version 3.8.3 of HDClone contains - besides many improved details - an important and useful new feature: HDClone 3.8.3 offers to freely adjust the target size of all partitions to be copied.

While it was only possible to assign the entire free space on the target medium only to one partition until now, from version 3.8.3 on, users can adjust the size of each partition individually by themselves. This works really easy by clicking and dragging with your mouse or, alternatively, with the arrow keys of the keyboard. The upsizing process itself is - as before - integrated into the copying process, which represents the fastest way. HDClone is able to upsize partitions with FAT, NTFS, Ext2, or Ext3 file systems.

HDClone 3.8.3 is available as from now in all editions. The Free Edition is available for free download at <http://www.miray.de/download/sat.hdclone.html>.
